

Gate Connector Straps

User's Guide by Smart Retract

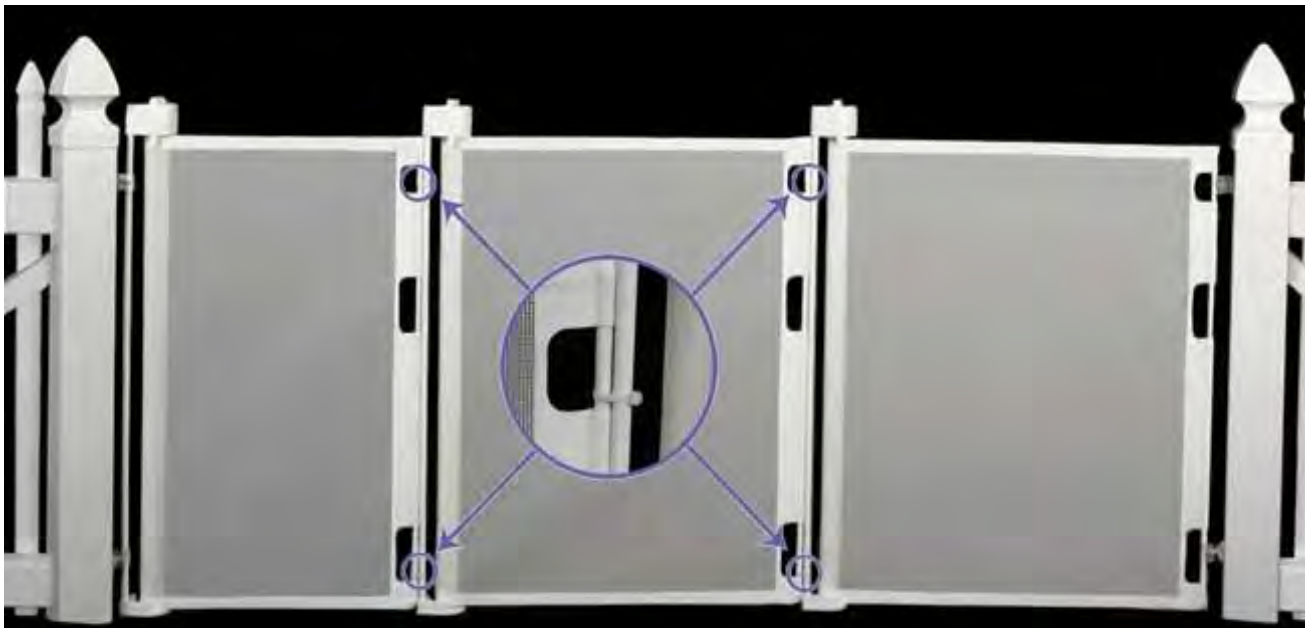

Parts Included: 10 attachment straps

Tools Needed: Scissors or wire snips

Using Gate Connector Straps to Hook Multiple Gates Together:

The handle rod of one gate connects to the rod of the reel section on the next gate (see photo below). This can be repeated with as many gates as you would need to cover your opening. The benefit of this is that you can still easily use one hand to open or close the gates while covering openings wider than 72".

IMPORTANT: Make sure to always lock ALL gates connected together.

Note: This use is only for special situations such as non-critical applications or where only a visual barrier is needed. Hooking multiple gates together with straps has not been tested or certified for use with children. It's just a special option for certain non-critical applications.
