

S-Hook User Guide by Smart Retract

Parts Included: 2 metal S-Hooks (1 set)

Tools Needed: None

Hooking two Retract-A-Gates together using one set of S-Hooks:

Fig. 1

Fig. 2

In order to cover larger areas (up to 104"/144"), you can use two S-hooks to hook two Retract-A-Gates together. Each safety gate mounts to either side of the opening, and then the handle rods hook together in the middle with the S-hooks. One S-hook would be used in the top cutouts and one S-hook would be used in the bottom cutouts (see Fig. 1). This solution is for special situations such as low traffic areas, non-critical applications, or where only a visual barrier is needed. Retract-A-Gate is very easy to operate with one hand; however, when using this option, you would need two hands and the process will be slower.
